All Guns are Not Created Equal.

A MIG gun should be durable, easy to use and customized to your specific application. Our MIG guns put you in control: you choose the options you need and we’ll build a gun to last. We even ship most of our guns within 24 hours.

Amperage ratings at 100% duty cycle with CO₂ gas: 150, 200, 300, 400, 500 and 600 amps.

Power cables available with high flex standard or steel monocoil conduits and in lengths to fit any application.

Multiple lightweight, comfortable handle and easy-to-change trigger options allow guns to be performance matched to user preference.

Necks available in fixed, rotatable and numerous length options to improve operator comfort.

Contact tip options include Centerfire™, Elliptical and Quik Tip™ and are available in wire sizes from .023” (0.6 mm) to 1/8” (3.2 mm).

Direct plugs and trigger leads connect to wire feeders and machines from all major manufacturers and are easily interchangeable to allow simple maintenance.

See BernardWelds.com Technical Support Section for detailed specs and replacement parts information.
## SAFETY PRECAUTIONS

### ELECTRICITY AND ELECTRIC SHOCK

1. Arc welding equipment uses electric energy to create molten bonded metal. Protect yourself and others from possible electric shock/electrocution with proper training and review of safety manuals.
2. Equipment improperly used can cause fatalities.
   - 2.1 Turn off any electrically powered equipment and powered support equipment when not in use. Accidental grounding or activation of equipment can cause circuit completion, electric shock, arc flash, fires, and burns.
   - 2.2 Electrode, gun components, and work surfaces are electrical conductors. These surfaces are ‘live’ when system is in use.
     - 2.2.1 Typically ‘stick’ equipment is ‘live’ when equipment is on. Although modern MIG welding equipment disconnects power from the electrode when not in use, the potential for accidental triggering occurs. Treat all equipment with safety in mind.
3. Wear proper safety equipment and clothing.
   - 3.1 Wear proper safety glasses or eye protection should arcing occur.
4. Disconnect power when making any service connections of equipment. ‘Lock Out, Tag Out’ all circuits and feeds.
5. Falls can be dangerous.
   - 5.1 Keep work area clear as not to trip or fall into open circuits, causing shock.
   - 5.2 When working at levels above ground, protect yourself from shock-causing falls.

### CYLINDERS MAY EXPLODE

1. Where compressed gases are to be used at the job site, special precautions should be used to prevent hazardous situations.
2. Always secure cylinders in an upright position to a fixed support so that they cannot be knocked over. Valve protection caps should always be in place except when cylinder is in use.
3. Locate cylinders clear of areas where they may be struck and safe distance from welding or any other source of heat, sparks, or flame.
4. Cylinders must be handled carefully to prevent damage to their walls, valves, or safety devices. Never lift cylinders by valves or caps.
5. Keep your head and face away from cylinder valve outlet regulator when opening cylinder valves.
6. All regulators, hoses, fittings, etc. should be properly maintained and in good condition as per the manufacturer’s recommendations. Faulty equipment should be replaced immediately.
7. Never strike an arc on a cylinder or allow any other electrically ‘live’ parts to come in contact with a cylinder. This can cause a violent rupture or lead to a rupture during handling.

### FIRE

1. The welding area.
   - 1.1 Remove all fire hazards from the weld area. If this is not possible, move work to a hazard-free area or cover all combustibles with a fire-resistant cover. Bear in mind that hot material and sparks from the welding process easily go through small cracks and openings into adjacent areas.
   - 1.2 Do not weld in areas which have a flammable atmosphere containing explosive gases or vapors. Avoid paint booths, solvent cleaning tanks, ventilators, and storage areas which contain grain or wood dust.
   - 1.3 After welding, turn off all equipment or place gun in a safe location in which no part of the electrode circuit is contacting the workpiece or ground. Accidental engagement could create a fire hazard.
1.4 Keep all equipment clean, free of oil and grease.
1.5 Keep the appropriate fire extinguishing equipment in weld area.
1.6 A fire watcher must be present with the appropriate fire extinguishing equipment and until the area is deemed safe after welding if the following conditions exist:
   - 1.6.1 Combustibles are within the weld area.
   - 1.6.2 Combustibles which can be ignited by sparks are near the weld area.
   - 1.6.3 Openings in the floors, dividers, and walls may expose combustibles to weld sparks.
   - 1.6.4 Combustibles are adjacent to floors, dividers, or walls that could be ignited by radiant or conductive heat.
1.7 After welding has been completed make sure the area is free of glowing embers, sparks, and any flames.

## WARNING

### ENSURE SAFETY ON THE JOB

1. Never dip electrode in water for cooling.
2. Do not stand in water or on damp floors while welding, or do not weld in the rain. Avoid wearing wet or sweaty clothes as they provide an easier electric current path to you.
3. Always insulate yourself from the work and ground by wearing proper safety equipment and clothing.
   - 3.1 Isolate yourself from all moist conditions with dry hole-free clothing, gloves, and rubber-soled (nonconductive) shoes. Use a nonconductive platform to isolate yourself from conductors, water, and dampness.
   - 3.2 When welding in damp locations and in awkward positions, such as sitting or lying, make certain insulating material is large enough to cover your full area of physical contact with work and ground.
   - 3.3 Fix water leaks prior to welding, or immediately stop should they occur, and provide proper repair.
4. Keep everything dry including clothing, work area, cables, electrode holder, and power supply.
5. Never handle ‘live’ electrical or welding equipment with bare hands while standing in water or while hands and/or feet are wet. Dangerous electric shock can result.

EMF Information

Considerations About Welding And The Effects Of Low Frequency Electric And Magnetic Fields

Welding Current, as it flows through welding cables, will cause electronic magnetic fields. There has been and still is some concern about such fields. However, after examining more than 500 studies spanning 17 years of research, a special blue ribbon committee of the National Research Council concluded that: “The body of evidence, in the committee’s judgment, has not demonstrated that exposure to power frequency electric and magnetic fields is a human-health hazard.” However, studies are still going forth and evidence continues to be examined. Until the final conclusions of the research are reached, you may wish to minimize your exposure to electromagnetic fields when welding or cutting.

To reduce magnetic fields in the workplace, use the following procedures:

1. Keep cables close together by twisting or taping them.
2. Arrange cables to on side and away from the operator.

3. Do not coil or drape cables around your body.
4. Keep Welding power source and cables as far away from operator as practical.
5. Connect work clamp to workpiece as close to the weld as possible.

About Pacemakers:
Pacemaker wearers consult your doctor first. If cleared by your doctor, then follow the above procedures as recommended.

California Proposition 65 Warning

This product contains chemicals, including lead, known to the state of California to cause cancer, and birth defects or other reproductive harm. Wash hands after use.

Introduction

Thank you for choosing Bernard. The product you have purchased has been carefully assembled and factory tested prior to shipment. Should you experience problems with installation or performance, please refer to the “Troubleshooting Guide” in this manual.

Before installing, compare the equipment received against the invoice to verify that the shipment is complete and undamaged. It is the responsibility of the purchaser to file all claims of damage or loss that may have occurred during transit with the carrier.

The manual contains general information on the operation of this Bernard product. Before installing or operating any equipment, read and understand the information and safety precautions presented in this manual. Also, note the various data plates, labels, and tags attached to the product.

While every precaution has been taken to assure the accuracy of this manual, Bernard assumes no responsibility for errors or omissions. Bernard assumes no liability for damages resulting from the use of the information contained herein. Bernard shall have no liability to the buyer for consequential damages or be liable to the in tort for any negligent manufacture of the goods or for the omissions of any warning therefrom.

Commercial Warranty

Product is warranted to be free from defects in material and workmanship for 180 days after the sale by an authorized Buyer.

Bernard reserves the right to repair, replace or refund the purchase price of non-conforming product. Product found not defective will be returned to the Buyer after notification by Customer Service.

Bernard makes no other warranty of any kind, expressed or implied, including, but not limited to the warranties of merchantability or fitness for any purpose. Bernard shall not be liable under any circumstances to Buyer, or to any person who shall purchase from Buyer, for damages of any kind. Including, but not limited to any, direct, indirect, incidental or consequential damages or loss of production or loss of profits resulting from any cause whatsoever, including, but not limited to, any delay, act, error or omission of Bernard.

Genuine Bernard parts must be used for safety and performance reasons or the warranty becomes invalid. Warranty shall not apply if accident, abuse, or misuse damages a product, or if a product is modified in any way except by authorized Bernard personnel.

Part I  General Description

The Bernard Q-Gun and S-Gun are designed primarily for processing mild steel electrode under GMAW (Gas Metal Arc Welding), MIG (Metal Inert Gas), MAG (Metal Active Gas), FCAW (Flux Cored Arc Welding), and MOG (Metal without Gas).

The Q-Gun and S-Gun provide rapid neck interchangeability, typically during production processes. Neck may also be positioned on line within a 360 degree rotation. This position allows for movements between standard horizontal welding, overhead, and hard-to-reach side angles. The neck includes an optional Jump Liner system that effectively reduces costs associated with one-piece liner systems. Bernard is concerned about your higher productivity.

The Q-Gun and S-Gun meet or exceed NEMA (National Electrical Manufacturer’s Association) EW3 requirements for guns used in a wide variety of applications including aluminum, silicone bronze, and hard facing alloys to name a few. With Bernard’s flexibility, many applications can be accommodated with field installed options increasing performance and maneuverability.
Part II  Installation

1. Your gun has been shipped with a specific feeder connector and sized for electrode as per the part number indicated on its package. Please inspect the received gun against this part number for accuracy.
2. Turn off power prior to any installation.
3. Fully extend gun and cable. Press liner fully into power pin.
4. Safely expose approximately 2" (51 mm) of electrode beyond feeder or adaptor block.

5a. Bernard Quick Disconnect
If you have purchased a Bernard Quick Disconnect gun, it is necessary to connect this unit to an adaptor kit providing the shielding gas, control circuit, and arc power. If this is a new installation, install the adaptor kit as per the kit instructions. With the Bernard adaptor installed, perform the following:
Orient power pin and gas pin with the adaptor receptacle.
Slide the electrode into the liner and push the power pin into the socket. Rotate the locking sleeve until the locking pins of adaptor drop into the receiver of locking sleeve. Continue to engage power pin while twisting locking sleeve to make connection. Shielding gas, control circuit, and power are now engaged.

5b. Direct Plug
Connect the power pin of the direct plug gun by sliding the electrode into the liner and the power fitting into the drive housing of the feeder. Fully seat the unit in position and tighten into place as designated in the manufacturer’s instructions. On initial installations, a thin film of silicone lubricant will aid installation and prevent O-ring damage.

Attach control lead wires to the appropriate plug, terminals, or lead kit. Plug or wire into the control circuit of the feeder as designated in manufacturer’s instructions.
If a gas hose is provided, connect to the feeder’s solenoid circuit to deliver shielding gas to the arc. If no gas hose is provided, gas is delivered through the power pin. Refer to the manufacturer’s instructions for proper gas connection at the feeder block or solenoid.

6. Remove nozzle from gas diffuser.

7a. Centerfire™ Tip - Pull tip from gas diffuser. An unobstructed electrode path has now been established.
7b. Elliptical Tip - Remove tip with a 1/8-1/4 turn counterclockwise while pulling. An unobstructed electrode path has now been established.
7c. Quik Tip™ - Remove tip with a 1/4 turn counterclockwise. An unobstructed electrode path has now been established.

8. Safely feed electrode through the gun and approximately 1" (25 mm) beyond gas diffuser.

9a. Centerfire Tip - Reinstall the tip over the electrode and lock into position by reinstalling the nozzle.
9b. Elliptical and Quik Tip - Reinstall the tip over the electrode locking in position with clockwise motion. Reinstall nozzle.

Welding current and duty cycle shall not exceed published specification of this product. If such conditions exist, product life and performance will be reduced.

Part III  Helpful Operating Tips

Nozzles:
1. If anti-spatter is used, do not coat nozzle insulator as this may degrade insulating material.
2. Nozzle should be cleaned as often as possible. Spatter buildup can often lead to poor gas shielding or short circuiting between the contact tip and the nozzle.
3. Spatter should be removed with the proper tools designed for spatter removal.
4. In high temperature welding applications, heavy duty consumables are recommended.

Contact Tips, Gas Diffusers:
1. Centerfire and Elliptical contact tips may be removed and rotated in gas diffuser, providing additional wear surfaces and extending the service life of the product.
2. Electrical stickout of the elliptical contact tip can be altered by positioning the contact tip in the desired location of the gas diffuser and rotating clockwise locking in place.
3. Inspect nozzle for spatter adhesion, blocked gas ports, and carbonized contact surfaces. Clean as often as possible.
4. If anti-spatter is used, periodically check gas ports for blockage.

5. When using dual shield electrode, periodically check gas ports in for clogging caused by flux from within the electrode.

Cable:
1. Periodically check torques of neck and end fittings. Loose fittings can cause overheating and premature failure of the gun.
2. Sharp bends and loops in the cable should be avoided. Often the best solution is to suspend the wire feeder from a boom or trolley, thus eliminating a large number of bends and keeping the cable clear of hot weldments.
3. Do not immerse liner into solvents for cleaning; the liner may be periodically blown out with compressed air.
4. Avoid rough surfaces and sharp edges that can cause tears and nicks in cable jacket which can cause premature failure.
5. Periodically check all cables and ground connections.
6. Use anti-seize on all threaded connections.
Feeder:
1. Check drive rolls for wear; be sure drive rolls and guide tubes are clean and free of debris. Do not overtighten drive rolls; set as per manufacturer's specifications.
2. Use clean, non-corroded electrode.
3. When installing or replacing electrode, you may: remove burrs from end of electrode, remove gas diffuser and tip, and/or straighten the first few inches of electrode.

End User Stocking Recommendations:
- Nozzles: 5 for every 1 gun in service
- Tips: 30 for every 1 gun in service
- Gas Diffusers: 4 for every 1 gun in service
- Triggers: 1 for every 10 guns in service
- Necks: 1 for every 20 guns in service
- Handle Kits: 1 for every 20 guns in service
- Replacement Cables: 1 for every 20 guns in service
- Strain Relief Kits: 1 for every 20 guns in service
- Adaptor Kits: Order as Necessary
- Direct Plug Kits: Order as Necessary

These stocking recommendations are only initial guidelines based on an 80 hour work period. You should work closely with your distributor to tailor a stocking program that suits your specific needs. Results will vary.

Part IV  Maintenance and Repair

See Replacement Parts page of www.BernardWelds.com for complete parts lists and specs

SECTION 1. TOOL CARE AND MAINTENANCE

A. Nozzle Care

1. Disconnect gun from equipment, allow to cool, and remove electrode from liner before servicing.
2. Use clean, non-corroded electrode.
3. When installing or replacing electrode, you may: remove burrs from end of electrode, remove gas diffuser and tip, and/or straighten the first few inches of electrode.

B. Service

Centerfire and Elliptical tips may be rotated in gas diffuser socket providing additional wear surface and extending the service life of the product.

C. Installation

Centerfire - Slide tip over electrode into gas diffuser and lock with a 1/8-1/4 turn clockwise rotation.
Elliptical - Slide tip over electrode into gas diffuser and lock with a 1/4 turn clockwise rotation.

SECTION 2. CONTACT TIP

Bernard has designed its contact tips to allow rapid installation and adjustment.

A. Removal

1. Cut electrode and remove all burrs before removing tip.
2. Centerfire - Remove threaded fit nozzle by turning in a counterclockwise direction. Pull the Centerfire tip from gas diffuser.
3. Elliptical - Removed with a 1/8-1/4 turn counterclockwise while pulling tip from gas diffuser.

B. Service

To extend contact tip life, reface front of tip and clean the bore. Centerfire and Elliptical tips may be rotated in gas diffuser socket providing additional wear surface and extending the service life of the product.

C. Installation

Centerfire - Slide tip over electrode into gas diffuser and lock with a 1/8-1/4 turn clockwise rotation.
Elliptical - Slide tip over electrode into gas diffuser and lock with a 1/4 turn clockwise rotation.

SECTION 3. GAS DIFFUSER

A. Removal

1. Cut electrode and remove all burrs before removing tip.
2. Centerfire - Slide tip over electrode into gas diffuser and replace threaded fit nozzle by threading in a clockwise direction. Nozzle body is used to secure contact tip.
3. Elliptical - Slide tip over electrode into gas diffuser and lock with a 1/8-1/4 turn clockwise rotation.

B. Service

Inspect gas diffuser for spatter, blocked gas ports, and carbonized surfaces. Clean as often as possible. Replace with new gas diffuser when wear prevents engagement of contact tip or nozzle.

C. Installation

Firmly secure gas diffuser with an appropriate wrench in a clockwise rotation.

SECTION 4. NECK

A. Removal

1. Rotatable - Grasp lock nut and rotate counterclockwise, rotation will free neck from end fitting.
2. Fixed - Remove liner and hex nut insulator. Using a wrench,
rotate locknut counterclockwise, rotation will free neck from end fitting.

B. Installation
Before installing, inspect neck and end fitting for debris, clean if necessary.
Rotatable - Install neck in reverse order, torque to 31-41 in-lbs. NOTE: Refer to Liners section for liner and Jump Liner (if used) cut off lengths.
Fixed - Install neck in reverse order. Tighten locknut to 15 ft-lbs (20.2 Nm). Be sure hex nut insulator is in place. NOTE: Refer to Liners section for liner and Jump Liner (if used) cut off lengths.

Section 5. Jump Liner (Optional)
A. Removal
Remove nozzle, gas diffuser and neck. Remove used Jump Liner from the back end of neck.

B. Service
Inspect for excessive wear and debris on the inside diameter. Do not dip Jump Liner in solvents for cleaning. Jump Liners may be periodically blown out with compressed air. Replace with new Jump Liner when excessive wear or debris produces poor electrode feed.

C. Installation
Insert Jump Liner making sure the liner stop is fully seated at the back of the neck. Take the tapered end of the neck and insert into end fitting of the gun handle. Install the neck. Trim and deburr the liner past the nozzle end of the neck. NOTE: Refer to Liners section for cut off lengths.
Install gas diffuser and nozzle.

Section 6. Handle

A. Removal
Remove screws, post fasteners. Separate and remove handle halves.

B. Service
Inspect for cracks, deformation of hex areas, debris, holes, loose or missing threaded inserts, excessive wear, exterior heat deformation, and warpage. If any of the above conditions exist, replace with new handle. Test switch for continuity. Clean any debris from trigger, if necessary, replace with new trigger handle assembly.

C. Installation
Position cable in handle half. Push lead wire terminals fully onto terminals of switch or snap into handle half. Position remaining handle half so leads are not pinched and move-ment of the trigger is not impaired. Reinstall post fasteners and screws; torque to 10 in-lbs (1.1 Nm)

Section 7. Cable
A. Inspection
Replace the cable assembly if the following conditions are evident on the exterior of the cable: cuts and/or abrasions in cable jacketing exposing copper stranding, abrupt kinking of cable causing abnormal heating in area of bend, loss of control circuit function as verified through continuity tests, slippage of insulating jacket exposing copper stranding, or crushed cable.

B. Replacement (excludes guns with OXO style handle)
Using a replacement cable, install the terminated cable end to the adapter block. It will be necessary to install or confirm that the flexible strain relief and cap is in place before preparation (See Figure 3).

FIGURE #3

Torque the end fitting into the adapter block to 17 ft-lbs (23 Nm). Strip the appropriate control leads 1/4” (6.4 mm) and crimp to appropriate butt connections of trigger leads. Finalize installation.

C. Repair
There is no authorized repair of welding cable due to product liability. Control leads may be repaired by splicing high temperature 18 AWG lead wire with nylon coated butt connectors, or the power cable’s spare leads can be used.

Section 8. Liners
A. Removal
Remove nozzle, gas diffuser and neck. Lay cable straight. Grasp liner lock which protrudes from power pin (some direct plugs may require removal of additional components to access the liner lock) and remove from cable assembly.

B. Service
Inspect for excessive wear and debris on the inside diameter. Do not dip liner in solvents for cleaning. Liner may be periodically blown out with compressed air. Replace with new liner when excessive wear or debris produces poor electrode feed.
Part IV  Maintenance and Repair (cont.)

C. Installation

Insert liner into power pin with cable laying straight. Continue until liner lock is fully seated into power pin. A twisting motion may be necessary to seat O-ring (some direct plugs may require installation of additional components to secure liner).

Making sure cable is straight, trim and deburr liner at the nozzle end of neck as directed below. Centerfire gas diffusers - Between 5/8" and 3/4" (1.6 - 1.9 cm) Elliptical gas diffusers (4235 and 4635) - 3/8" (9.5 mm) Elliptical gas diffusers (4335 and 4435) - 1-3/8" (3.5 cm) Quik Tip gas diffusers (D118Q) - 7/8" (2.2 cm) Quik Tip gas diffusers (D114Q) - 3/4" (1.9 cm) When using Jump Liner: Trim and deburr liner with 1/4" (6.4 mm) extending beyond the gun handle. Install neck.

Install gas diffuser and nozzle.

Section 9. Rigid Strain Relief

A. Removal

Using a counterclockwise motion, unseat cap and sleeve assembly from rigid strain relief. Remove screw securing strain relief to adapter block.

B. Service

Inspect all components for cracks, debris, excessive wear and breakage. Replace with new components if safety or performance of product is compromised.

C. Installation

Align flats in rigid strain relief with flats on adapter block. Slide strain relief onto adapter block and install screw. Torque screw to 12 in-lbs (1.4 Nm). Using the arrows on the cap to align with mating grooves, slide the cap and sleeve assembly toward the rigid strain relief until seated, and turn clockwise until engaging snap is felt.

Section 10a. Bernard Quick Disconnect Gun Connection

A. Removal

Remove liner from gun assembly (Section 8). Viewing quick disconnect from cable end, align wave spring and large snap ring with opening access slot (See Figure 4).

FIGURE #4

Compress large snap ring with internal snap ring pliers and remove locking sleeve. Remove medium external snap ring with external snap ring pliers from power pin. Remove the control leads from the rigid strain relief by compressing the locking tabs on the contact pins with needle nose pliers and pulling the lead wire assembly from the back. Remove rigid strain relief by using a counterclockwise motion to unseat cap and sleeve assembly. Unthread power pin from end fitting with appropriate wrenches in a counterclockwise rotation (See Figure 5).

⚠️ NOTICE

Do not wrench or clamp on crimped cable connection, this will damage the power cable connection.

The gas pin may be disassembled by removing the small retaining ring and pulling the pin from the rigid strain relief.

FIGURE #5

Do not wrench or clamp on crimped cable connection, this will damage the power cable connection.

The gas pin may be disassembled by removing the small retaining ring and pulling the pin from the rigid strain relief.
Part IV  Maintenance and Repair (cont.)

Section 10b. Euro Gun Connection

A. Removal
Remove liner (Section 8) and rigid strain relief (Section 9) from gun assembly. Disconnect the Euro block lead set from gun by cutting as close as possible on both sides of the butt connectors in order to preserve wire for later retermination. Slide adaptor nut toward cable, thus exposing the Euro block. Remove Euro block from end fitting using appropriate wrenches in a counterclockwise rotation (See Figure 6).

**NOTICE**
Do not wrench or clamp on crimped cable connection, this will damage the power cable connection.

B. Service
Test lead wires for continuity when trigger is engaged. Inspect all components for cracks, debris, excessive wear, and breakage. Replace with new components if safety or performance of product is compromised.

C. Installation
Slide adaptor nut over cable with internal threads facing toward the rear of the gun. Assemble Euro block onto end fitting in a clockwise rotation using appropriate wrenches. Torque to 17 ft-lbs (23 Nm).

**NOTICE**
Do not wrench or clamp on crimped cable connection, this will damage power cable connection.

Seat adaptor nut on Euro block. Adaptor nut should rotate freely. Strip the control leads 1/4" (6.5 mm) and reterminate with appropriate butt connectors (Bernard P/N 4932) (See Figure 6). Install rigid strain relief (Section 9) and liner (Section 8).

Section 10c. All Other Direct Plug Gun Connections

A. Removal
If necessary, remove the power pin tip that retains the liner from the power pin with the appropriate wrench. Remove liner and rigid strain relief from gun assembly. Position control lead wires as necessary as not to damage them. Remove power pin from adapter block using appropriate wrenches in a counterclockwise rotation (See Figure 7).

</thead>
<tbody>
<tr>
<td></td>
<td>3. Improper shielding.</td>
<td>3. a. Verify shielding gas coverage.</td>
</tr>
<tr>
<td></td>
<td>4. Contaminated wire or work piece.</td>
<td>3. b. Verify gas mixture.</td>
</tr>
<tr>
<td></td>
<td>7. Ruptured gas hose.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>8. Control circuit loss.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>9. Worn, cut or missing O-rings.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>10. Loose fittings.</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. Gas diffuser damaged.</td>
<td>2. Replace gas diffuser.</td>
</tr>
<tr>
<td></td>
<td>3. Extreme heat or duty cycle.</td>
<td>3. Replace with heavy duty consumables.</td>
</tr>
<tr>
<td></td>
<td>4. Solenoid faulty.</td>
<td>4. Replace solenoid.</td>
</tr>
<tr>
<td></td>
<td>5. No gas.</td>
<td>5. a. Install full tanks.</td>
</tr>
<tr>
<td></td>
<td>6. Flow improperly set.</td>
<td>5. b. Check supply.</td>
</tr>
<tr>
<td></td>
<td>7. Gas ports plugged.</td>
<td>5. c. Hose leaks.</td>
</tr>
<tr>
<td></td>
<td>9. Control circuit loss.</td>
<td>7. a. Clean or replace gas diffuser.</td>
</tr>
<tr>
<td></td>
<td>10. Worn, cut or missing O-rings.</td>
<td>7. b. Clean nozzle.</td>
</tr>
<tr>
<td></td>
<td>11. Loose fittings.</td>
<td>8. Repair or replace cable or line.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>9. See 'Electrode Does Not Feed'.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>10. Replace O-rings</td>
</tr>
<tr>
<td></td>
<td></td>
<td>11. Tighten gun &amp; cable connections to specified torque. See 'Maintenance &amp; Repair' (Section 7).</td>
</tr>
<tr>
<td></td>
<td>2. Loose or poor power connection.</td>
<td>2. a. Decrease parameters to within gun rating.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. b. Increase parameters to within gun rating.</td>
</tr>
<tr>
<td>10. Liner is discolored full length</td>
<td>1. Short circuit to electrode.</td>
<td>1. Isolate electrode reel from feeder and drive block. Consult feeder manufacturers manual.</td>
</tr>
<tr>
<td></td>
<td>2. Broken copper stranding in power cable.</td>
<td>2. Replace Gun.</td>
</tr>
<tr>
<td></td>
<td>2. Synthetic liner melting.</td>
<td>2. a. Replace liner.</td>
</tr>
<tr>
<td></td>
<td>3. Wire deformed by feed rolls.</td>
<td>2. b. Replace with composite liner.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. c. Replace with Q-Gun neck and Jump Liner.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3. Adjust drive rolls as per feeder manufacturer's manual.</td>
</tr>
</tbody>
</table>

*In some cases with aluminum and mild steels, it may be necessary to use a contact tip with either a larger or smaller bore size.*
